Project Design Phase

Proposed Solution

Date	20 September 2026
Team ID	Individual
Project Name	Digital Metro Ticket Booking System using ServiceNow
Maximum Marks	2 Marks

Proposed Solution:

Service Catalog – **Fare Logic** – **Digital Payment** – **QR Ticket** – **UAT & Deployment**

S.No.	Parameter	Description
1	**Problem Statement (Problem to be solved)**	Metro passengers need a fast, simple and accessible way to book tickets without depending on physical counters. Manual ticketing can create queues, waiting time, paper usage and avoidable operational effort.
2	**Idea / Solution description**	Create a ServiceNow Service Catalog item for metro ticket booking. The passenger selects Source, Destination, Passenger Type and Number of Tickets. The system calculates the fare automatically, supports digital payment, and generates a QR-code digital ticket after successful booking.
3	**Novelty / Uniqueness**	The solution brings ticket booking, automated fare calculation and QR-code ticket generation into one ServiceNow-based digital workflow. Station details can be mapped to the booking form, reducing manual processing and making the journey more transparent.
4	**Social Impact / Customer Satisfaction**	Passengers get a convenient digital alternative to counter-based ticketing, reducing waiting and paper use. QR-based tickets improve accessibility, while clear fare information and digital payment options provide a smoother booking experience.
5	**Business Model (Revenue Model)**	This is a metro service-management and digital ticketing solution rather than a standalone commercial product. It supports operational efficiency, reduces manual ticketing effort, improves transaction handling, and provides digital transaction data that can support service planning.
6	**Scalability of the Solution**	The solution can be extended to more metro stations, routes, passenger categories, fare rules, payment methods and booking volumes. ServiceNow Service Catalog, scripting, workflows, UI Pages and reusable configurations can support future expansion and deployment.
