Project Development Phase

Project Testing & Validation

Date	20/09/2026
Team ID	Individual
Project Name	Digital Metro Ticket Booking System using ServiceNow
Maximum Marks	4 Marks

Metro Ticket Booking Testing:

Testing and validation follows the configured ServiceNow booking journey from catalog submission to deployment.

Development / Validation Flow

Catalog Form | Fare Logic | QR Integration | Station Mapping | UI Pages | UAT & Deployment

S.No.	Parameter	Validation / Expected Value	Screenshot
1	**Service Catalog Item**	Metro Ticket Booking catalog item is created and accessible. Fields include Source, Destination, Passenger Type and Number of Tickets.	SCREENSHOT Catalog item / form *Insert actual ServiceNow screenshot*
2	**Station Details Mapping**	Configured metro stations are available for Source and Destination selection, with valid station mappings.	SCREENSHOT Station mapping / variables *Insert actual ServiceNow screenshot*
3	**Booking Submission**	Passenger enters the required booking variables and submits the ticket request successfully.	SCREENSHOT Booking form submission *Insert actual ServiceNow screenshot*
4	**Request (REQ)**	A ServiceNow request is generated after the passenger submits the ticket booking request.	SCREENSHOT REQ record *Insert actual ServiceNow screenshot*
5	**Requested Item (RITM)**	The RITM is created and contains the submitted ticket-booking variables and journey details.	SCREENSHOT RITM record *Insert actual ServiceNow screenshot*
6	**Automated Fare Calculation**	Fare logic calculates the ticket amount based on the configured journey and passenger details and displays the total fare.	SCREENSHOT Fare result / script *Insert actual ServiceNow screenshot*

7	**Digital Payment**	Passenger proceeds with the configured digital payment method. Payment and booking status are recorded after the transaction.	**SCREENSHOT** Payment / status *Insert actual ServiceNow screenshot*
8	**QR Code Generation**	After successful booking, a digital ticket is generated with a QR code that can be accessed by the passenger.	**SCREENSHOT** QR ticket *Insert actual ServiceNow screenshot*
9	**UI Page / Passenger Experience**	The passenger-facing UI presents booking information clearly and provides access to the generated digital ticket.	**SCREENSHOT** UI Page *Insert actual ServiceNow screenshot*
10	**Business Rule / Automation**	Configured ServiceNow scripting and workflow automation execute the fare, booking and QR-ticket process as expected.	**SCREENSHOT** Automation / script *Insert actual ServiceNow screenshot*
11	**Ticket Tracking & Notification**	Booking status and relevant confirmation or ticket notifications are available to the passenger after submission and completion.	**SCREENSHOT** Status / notification *Insert actual ServiceNow screenshot*
12	**UAT & Deployment**	End-to-end user acceptance testing is completed, configurations are captured for deployment, and the solution is ready for deployment.	**SCREENSHOT** UAT / Update Set *Insert actual ServiceNow screenshot*
